

Projects

The Center for Excellence in Primary Care builds the evidence base for primary care transformation by testing new models of care and studying strategies to optimize primary care delivery. We also train and educate the healthcare workforce and shape the pipeline of future healthcare professionals by providing direct coaching to practices undergoing transformation, identifying emerging opportunities and challenges to primary care, summarizing innovations and issues, and helping ensure that relevant research is in the hands of policy makers.

Use the navigation menu on the left to learn more about our exciting projects.
