

The 10 Building Blocks of Primary Care Building Blocks of Primary Care Assessment (BBPCA)

Background and Description

The Building Blocks of Primary Care Assessment is designed to assess the organizational change of a primary care practice as measured against the 10 Building Blocks of High Performing Primary Care. The BBPCA incorporates all of the original items from the PCMH-A, reorganized into the framework of the 10 Building Blocks, and it includes a number of supplemental questions to examine areas not addressed by the PCMH-A.

Instructions

For each row, mark the number that best corresponds to the level of care that is currently provided at your site. The rows in this form present key aspects of patient-centered care. Each aspect is divided into levels showing various stages in development toward a patient-centered medical home. The states are represented by points that range from 1 to 12, with higher point values indicate that the actions described in that box are more fully implemented. To get the most out of the BBPCA, we recommend that you form a multidisciplinary team of management, clinicians, front line staff, and patients. Ask each person to complete the assessment individually, and then meet to discuss your answers. When you complete your assessment, ask the group to identify key areas in which they feel that they can grow.

UCSF Center for Excellence in Primary Care

The Center for Excellence in Primary Care (CEPC) identifies, develops, tests, and disseminates promising innovations in primary care to improve the patient experience, enhance population health and health equity, reduce the cost of care, and restore joy and satisfaction in the practice of primary care.

Acknowledgments

This survey is derived from a public version of The Patient Centered Medical Home Assessment created for use in the Safety Net Medical Home Initiative by the MacColl Center for Health Care Innovation at Group Health Cooperative of Puget Sound. BUILDING BLOCKS OF PRIMARY CARE ASSESSMENT (BBPCA)

DIRECTIONS FOR COMPLETING THE SURVEY

This survey is designed to assess the organizational change of a primary care practice as measured against the 10 Building Blocks of High Performing Primary Care. The instrument is a modification of the Patient-Centered Medical Home Assessment Tool (PCMH-A), developed by the MacColl Center for Health Care Innovation (see below). The BBPCA incorporates all of the original items from the PCMH-A, reorganized into the framework of the 10 Building Blocks, and it includes a number of supplemental questions to examine areas not addressed by the PCMH-A.

- 2. For each row, mark the number that best corresponds to the level of care that is currently provided at your site. The rows in this form present key aspects of patient-centered care. Each aspect is divided into levels showing various stages in development toward a patient-centered medical home. The stages are represented by points that range from 1 to 12. The higher point values indicate that the actions described in that box are more fully implemented.
